1. Introduction

The purpose of this document is to provide details of the new features and functionality that will be available with the next release of igloo.

igloo 2018 T3 (Release date: October 2018)

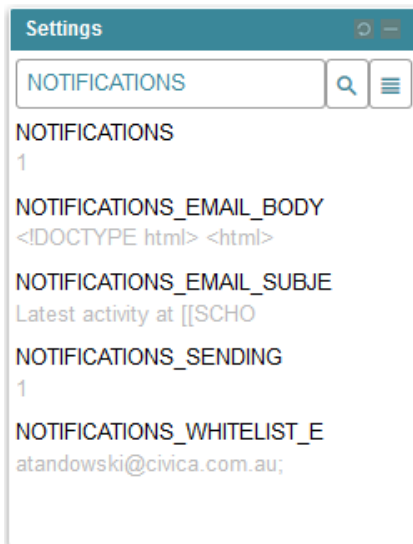

This release is primarily a hardening release with security fixes as well as a patch for notifications module.

For additional information, e.g. details on bug fixes and additional minor improvements please refer to the Release Notes.

2. Notifications

This release includes fixes and improvements for the notifications module.

Important: By default, the notifications module is disabled until explicitly enabled on your portal. To do this there are two key settings to review 'NOTIFICATIONS' and 'NOTIFICATIONS_SENDING', accessible from the Settings block:

2.1. NOTIFICATIONS Setting: Enable On Screen Notifications

The NOTIFICATIONS setting is set off by default. To enable notifications this must be set to 1 (on). Once enabled, on screen notifications will display for users: On screen notifications can be enabled while still having email notifications disabled.

2.2. NOTIFICATIONS_SENDING Setting: Enable Notification emails

The NOTIFICATIONS_SENDING switch that will activate notification emails. If turned on, notifications emails will be sent to users. If turned off, onscreen notifications will still display but emails will not be sent.

3. Custom fields for My Details or My Children (IG-107)

Any fields contained in the underlying student administration database can now be surfaced and displayed on these blocks. Please contact Civica to arrange for the projects team to configure extra fields if necessary. The following shows an example of the exam number and userid field added to the my children block :
